(54) Title: APPARATUS AND METHOD FOR PANEL CONSTRUCTION

(57) Abstract: Formwork (1) adapted for the consecutive formation of a plurality of panels, each subsequent panel being formed upon a previous panel, said formwork comprising a bed (3) having a plurality of corners, a column (2) provided at each corner and a respective side member (4) at each side of the bed (3), each side member (3) supported by a respective adjacent pair of columns (2), wherein the bed (3) and side members (4) define a forming space for formation of a panel, each column (2) having locating means (144) adapted to receive and support at least one side member (4) at a plurality of locations along the length of the column (2), each location supporting the respective side member (4) in coplanar relationship to its position in other of the locations wherein the bed for a subsequent panel is defined by the upper surface of the previous panel and the side members (4) extend from the upper surface of the previous panel to define the forming space for the subsequent panel.
